

Wiring Diagram for 295SLSA6 to Whelen WeCan Barlight Controller

* BT5 & BT6 are powered by the two 10ga power wires by default but can be powered by auxiliary input on terminals 10 & 13 respectively. It is recommended to use the default internal source.

295SLSA6 Rear View

*SL3 outputs 3,4&5 are bridged together internally. The three WeCan inputs triggered in position SL3 can be combined to one terminal to allow connection of the front flashers and any other desired equipment.
